THE ELECTRONIC STATION

Problem Statement

Electronic Station Inventory Project provides information on each and every product which is available within the store. Its basic purpose is to maintain stock details and inform on time, if any product is going out of stock along with various other information related to its sources. It will also provide you with every electronic gadgets that are usually used, if the stock details of the station will not be accurate, then there will be a huge loss of money and market value.

Outcomes

This project helps in the easier form to provide information on time, details of all the products and the location where it is stored. If the current product is out of stock or going to be stock out, informing details regarding that product.
